### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Bryan H. Davidson on June 16, 2010.

The application has been amended as follows:

#### **In the claims**

Claim 1, line 29, delete "its" and insert - -a- -; and after 'salt' insert - -of the second phosphine ligand- -.

#### ***Allowable Subject Matter***

2. Claims 1 – 9, 12 – 15, 17 and 19 – 22 are allowed.
3. The following is an examiner's statement of reasons for allowance: None of the prior art references teach or suggest a motivation for the production of alkylpentenoate by carbonylation of 1,3-butadiene using the catalyst system set out in claim1. The catalyst system includes a source of palladium (a), a phosphine process ligand selected from the group consisting of those set out in (b) a source of anions and feeding the process ligand (b) continuously or periodically into the process as ligand make-up at a temperature of 50°C or lower, and feeding a second phosphine ligand different from

Art Unit: 1621

the process ligand (b), where the second phosphine ligand is chosen because the phosphonium salt of the second phosphine ligand is reversible under carbonylation.

Further, the claimed phosphine process ligands of Applicant's (b) and the second phosphine ligand, different from process ligand (b), used by Applicant; are known to be useful in the process for the carbonylation of 1,3-butadiene to produce alkylpentenoate. However, the catalyst system claimed: which includes a source of palladium (a), a phosphine process ligand selected from the group consisting of those set out in (b) a source of anions and feeding the process ligand (b) continuously or periodically into the process as ligand make-up at a temperature of 50°C or lower, and feeding a second phosphine ligand different from the process ligand (b), where the second phosphine ligand is chosen because the phosphonium salt of the second phosphine ligand is reversible under carbonylation; is not taught nor is there a motivation for the system suggested by the prior art references; for use in carbonylation of 1,3-butadiene to produce the monoester.

The combined teachings of Drent et al. (US 6,737,542) (Drent 3), Drent et al. (US 5,304,674) (Drent 2), Drent (WO 02/26690) (Drent 1) and Sielcken et al. (US 5,495,041), were cited as prior art references in the Office Action mailed November 19, 2009. However, Applicant's comparative experiment A and B is a comparison of their process to that of Drent 1, which produces high yields of methyl pentenoate. (98%) using only phosphine process ligands that are in line with Applicant process ligands (b).

Additionally, the process of Drent 3, Drent 2 and Sielcken use the known phosphine ligands in their catalyst system, however, they do not show selectivity to

Art Unit: 1621

alkylpentenoate reaction product of 87% and higher using a catalyst system comprising feeding the process ligand (b) continuously or periodically into the process as ligand make-up at a temperature of 50°C or lower, and feeding a second phosphine ligand different from the process ligand (b), where the second phosphine ligand is chosen because the phosphonium salt of the second phosphine ligand is reversible under carbonylation. Each of these references add the 1,3-butadiene to the catalyst system in the reaction vessel, where the temperature is raised to over 100°C, and no additional make-up phosphine ligand is added. Applicant's Examples 2 and 3 demonstrate the unexpected benefits of the system involving lower temperature make-up catalyst feeds and the use of a different phosphine ligand as the second make-up phosphine: i.e. stability of the catalyst system which leads to reduced degradation and catalyst regeneration.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
